DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Regarding claims 1-20, the claims are directed to non-statutory subject matter. The claims recite a mere calculation without any useful, tangible and tangible result. For example, claim 1, recites *computing, from a signal received over the channel in a receiver, a set of estimated Channel Transfer Factors (CTF's), where v is the subchannel number, calculating, for a predetermined strictly positive integer d , a correlation factor C_d representing the correlations, both in amplitude and in phase, between pairs of said computed CTF estimates, and estimating, in said receiver, the time-dispersion of said channel using the calculated correlation factor C_d .* The claim in and of itself does not relate to a material transformation or anything other than the mere operation of a mathematical formula. The claims fail to utilize the calculation is such a manner to functionally or structurally affect a system, in essence the “time-dispersion” is merely calculated and nothing more. The claims do not utilize the calculation to create a novel and useful structure created with the aid of a calculation, instead the claims represent nothing more than the manipulation of mathematical constructs and represents a mere abstract idea. While abstract ideas employed to perform a real-world function may be patentable, the claims fail to set forth any relevant function and the claims fail to produce a beneficial result.

Response to Arguments

3. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.
